COMPLIANCE & QUALITY COMMITMENT_

A gift must be safe.

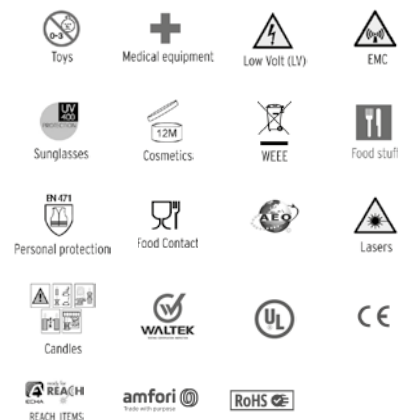

Product Certification. The More Than Gifts products are assessed carefully and comply with EU safety, health and environmental requirements. To ensure all products meet the European qualification criteria, quality assurance tests have been performed and all relevant test reports are available and are not older than 3 years.

Responsible chain management . We take the working conditions within our supplier factories very seriously. In order to achieve industry-wide improvements, we are member of amfori BSCI (Business Social Compliance Initiative), a group of over 2000 companies that works to ensure that conditions in our suppliers' factories are appropriate, safe, and meet legal requirements. amfori BSCI conduct independent, third-party audits on our behalf. This is an ongoing process, suppliers' factories are in an audit cycle which will not be closed.

Product Certification

Reach. The EU REACH regulation applies in different ways in different product areas. It addresses the production and use of chemical substances and their potential impact on health and the environment. Since standards are subject to constant change we closely follow the latest requirements (Annex XVII). Via our team of specialists we can ensure that there are no restricted substances in the products sold and printing inks used.

EMC and RoHs. Technology and gadgets items are indispensable in our daily lives. Therefore we need to control the components used to negate the potential damaging effects of electromagnetic interference. In order to ensure our products function correctly and as designed, EMC testing has been implemented. EMC tests the ability of devices to withstand interference from other electrical or electronic equipment and environments and verify that any

emissions cannot cause harmful interference with other electrical or electronic equipment. RoHs (Restriction of Hazardous Substances) tests determine the values of the six restricted substances (such as Cadmium, Lead and Mercury).

CE marking. CE is an abbreviation for "Conformité Européenne" (European Conformity). As part of our compliance procedure all products are classified under the relevant European directives and regulations. However, only for product categories subject to relevant directives or regulations are required (and allowed) to bear CE marking. Mentioned CE marking is a mandatory conformity marking within the European Economic Area (EEA).

Printing Techniques

Having your logo printed with the widest range of printing techniques has never been so easy. These are the main techniques used to print your logo.

SUBLIMATION

Sublimation is one of the few methods you can print full coloured images onto hard surfaces or polyester coated items. Number of colours is unlimited for complete customized logos.

DOMING

The doming procedure consists of printing the logo on a self adhesive label domed with an epoxy resin layer. It is a durable solution and cannot be easily scratched or dented.

DIGITAL PRINTING

Digital printing is done by placing the product under a four-color digital printer. Compared to the conventional technique it is a more environmental friendly solution.

DIGITAL LABEL

Digital Label is used on items where no other technique can be applied. With his method full colour label is printed and stuck on the most optimum position of the product.

BUTTON

The print is carried out prior to assembly of the item. This allows for a full customized design.

DIGITAL TRANSFER

Digital Transfer is one of the most popular methods for full colour logos and designs. This Four Colour Process hits over thousands of colours resulting in a photographic quality decoration.

SCREEN TRANSFER

Economic option for simpler designs. The logo is printed on a sheet by means of serigraphy (which allows 1 to 8 colours) and then transferred to the product.

CERAMIC TRANSFER

The technique of ceramic transfer printing is applied to ceramic promotional cups and items where the logo is printed on a sheet and transferred by water.

SCREEN PRINTING

Main advantage of screen printing is the unique result you can achieve. It can be applied on a variety of materials but mostly used on fabrics since a larger size can be achieved.

PAD PRINTING

Pad printing is a technique where rubber stamps are used to print the logo on the item. With this technique you achieve a sharper finish and a perfect colour matching (PMS) is achievable.

ROUNDSCREEN

Round screen printing is a method that allows round personalisation. It is an optimum solution for the popular reusable bottles since, due to its form, the print position is larger than can be achieved using the traditional printing method.

EMBOSSING

Embossing is a popular technique for marking products made of leather, PU or cardboard. The logo is stamped on the material being sunk and making it indelible.

EMBROIDERY

Embroidery is a very popular technique in products such as caps, textiles or advertising bags where the finishing touch is in the sewn logo with woven threads.

LASER ENGRAVING

Laser engraving can be applied to items made of natural materials like wood and metals. With laser engraving the result of branding is precise, clean and permanent.
